FOR IMMEDIATE RELEASE

Overnight Train Maintenance Continues at Denver International Airport

DENVER – Feb. 16, 2016 – Additional dates have been added for overnight work to upgrade the hardware and software that operates the trains that transport passengers between the terminal and concourses at Denver International Airport (DEN).

Due to this scheduled maintenance, the trains will not be transporting passengers between the hours of 1 and 4 a.m. on Feb. 17-19, Feb. 23-26 and March 8-10. Additional dates are possible this summer as the work is completed.

During the maintenance work, passengers must use the A Bridge-security checkpoint, located on Level 6, north, in Jeppesen Terminal from 9 p.m. to 4:30 a.m. during the evenings of the work because the north and south security checkpoints will be closed. The time it takes to go through the TSA security checkpoint will not be impacted because there is normally only one TSA checkpoint open between 9 p.m. and 4:30 a.m.

The majority of the flights during this timeframe depart from the A Gates so most passengers will not be impacted. However, those passengers departing on a flight from the B or C Gates between 1 and 4 a.m. will be directed through the A Bridge-security checkpoint, and will then be directed by airport personnel to bus stops for transport to the B and C Concourses. Customer service staff will be available to help guide passengers to the appropriate checkpoint and to the buses. Passengers should allow extra time to arrive at their gate.

It is possible that a few flights will arrive at the B and C Gates during this timeframe; those passengers should expect to be bused to the A Concourse for access via the pedestrian bridge to Jeppesen Terminal. Airport personnel and signage will assist with way finding. When possible, airlines may deplane passengers on the A Concourse for easier access to the pedestrian bridge leading to Jeppesen Terminal.

Airport operations will make the decision whether or not to proceed with the train shutdown each evening in case there are any significant changes in airline schedules due to weather, etc.

These are the anticipated final scheduled dates for the maintenance work. If additional dates are required, more information will be provided.

Denver International Airport is the 17th-busiest airport in the world and the fifth-busiest airport in the United States. With more than 53 million passengers traveling through the airport each year, DEN is one of the busiest airline hubs in the world's largest aviation market. DEN is the primary economic engine for the state of Colorado, generating more than \$26 billion for the region annually.
