ACTIVITY DESCRIPTION

The following guideline outlines aircraft, ground access vehicle (e.g., car, pickup truck, van, bus, shuttle) and ground service equipment (e.g., baggage tug, pushback tractor, belt loader, fire truck, deicer truck, catering truck, sweeper, power units) washing requirements and management of materials associated with washing and cleaning (e.g., detergents, wash water) of this equipment.

POTENTIAL ENVIRONMENTAL RISKS

The following environmental concerns are associated with these activities:

- Release of contaminants in wash fluids to storm sewer, waterways, or soils, such as:
- Oil and Grease
- Fuels
- Solvents
- Soaps and Detergents
- Propylene Glycol/Aircraft Deicing Fluid
- Ethylene Glycol/Radiator Coolant (Antifreeze)
- Pavement Deicers
- Sediments
- Hydraulic Fluids or other maintenance materials
- Chlorine

Potential consequences from performing the activity incorrectly are:

- Property damage, personal injury or damage to the environment
- Regulatory non-compliance, Notices of Violation, and related [financial & non-financial] penalties

RECOMMENDED OPERATING CONTROLS

Prohibited Activities

- Outdoor washing of aircraft, vehicles, and equipment is prohibited at DEN, except as outlined in this document.
- Discharge of wash water from aircraft, vehicle, and equipment washing to the storm sewer, waterways, or soil is prohibited at DEN.
- Discharge of any chemical into the sanitary sewer without DEN Environmental Services (ES) approval is prohibited at DEN.

General Considerations

- Each tenant/operator or employee conducting cleaning/washing activities is responsible for understanding the applicable regulations and managing their activities accordingly; this Environmental Guideline is meant as guidance only and does not supersede any regulations.
- Use dry washing techniques as feasible, such as sweeping, vacuuming, wiping, air blasting, or using dry absorbents or cleaners.
- Use only cleaning solutions that comply with Metro Wastewater Reclamation District and Denver Wastewater requirements. Contact DEN ES for product approval.
- Eliminate mixing of wash water with stormwater through the use of berms, sloping, overhead cover, vacuum truck, and other appropriate means.

- Practice good housekeeping procedures to keep the wash area clean and free of waste.
- “Truck and car wash units” are exempt from Air Pollutant Emission Notice requirements (APENs) and Operating Permit requirements under Colorado air quality regulations (5 CCR 1001-5).

Indoor Washing Requirements

Use designated wash facility indoors. The wash facility should:

- Filter and recycle water where practical.
- For wash water that cannot be recycled, utilize appropriate pretreatment device(s) for separation of oils and grease and the settling of solids (e.g., oil/water separator, sand trap) prior to discharge to the sanitary sewer.

Outdoor Washing Requirements

Outdoor washing is prohibited unless approved in writing by DEN ES OR one of the following requirements is met:

- A dry washing method is employed.
- Washing is performed on a relatively impervious surface (e.g., concrete, plastic) and wash water is collected. Collected wash water must be profiled, manifested, and transported off site for appropriate disposal at a permitted facility, or appropriately pretreated prior to discharge to the sanitary sewer with prior approval.
- Washing of aircraft, vehicles, and equipment is performed within a DEN Deicing Waste (DIW) collection system with prior approval by DEN ES.

Training Requirements

- Employees should be trained in company aircraft, vehicle, and/or equipment washing/cleaning procedures as well as in spill response, which may include on-the-job training.
- Employee training programs shall inform personnel at all levels of responsibility who are involved in industrial activities that may impact stormwater runoff. Stormwater training shall address topics such as spill response, good housekeeping, and material management practices. Contractor or temporary personnel shall be informed of plant operation and design features in order to prevent discharges or spills from occurring.

Storage and Materials Management

- Preferably, cleaning solutions should be stored indoors utilizing secondary containment if there is a drain in the vicinity. If cleaning solutions must be stored outdoors, secondary containment and cover must be used.
- Maintain legible labels and markings on all containers and tanks; labels on all containers must have the name of the owner of the container, an associated contact telephone number, an appropriate hazard warning, and must clearly indicate the contents. In addition, the name on the label must match the name on the corresponding Safety Data Sheet (SDS).

PLANNING REQUIREMENTS

Complete the DEN Stormwater Management Plan (SWMP) Industrial Activities Survey/Matrix in Appendix B of the plan to assist in determining other potentially relevant environmental guidelines and whether coverage under a SWMP is required.

- This document is available at <http://business.flydenver.com/environmental>.
- If applicable, the operator will need to decide whether to use the DEN SWMP or generate their own SWMP for review by DEN Environmental Services.

Prior to use, obtain approval from DEN ES for cleaning solutions used in wet washing methods in which wash water will be discharged to the sanitary sewer.

Maintain adequate supplies of spill response equipment and materials near areas where cleaning/washing occurs and cleaning/washing solutions are stored, and where spills are likely to occur.

CRITICAL TASKS

All aircraft, vehicle, and equipment washing activities utilizing wet methods must capture and contain wash fluids prior to disposal unless prior arrangements have been made with DEN ES.

- Contact DEN ES for further assistance or to answer any questions.

EMERGENCY RESPONSE

If a spill occurs, refer to Environmental Guideline ES-301-5.02 Spill Response.

- Call DEN Communications Center immediately at 303-342-4200 for all spills.
- Spills/releases should be contained and cleaned up as soon as possible using either manual (e.g., absorbents, shovel) or mechanical (e.g., vacuum, sweeper) means to minimize potential stormwater impacts. Containerized wastes should be properly labeled, stored, and disposed.
- Spills of any kind shall not be washed into any storm sewer or waterway, or onto any soils.

INSPECTION AND MAINTENANCE REQUIREMENTS

Pretreatment devices and sumps must be included in a routine inspection and maintenance program.

- See Environmental Guideline: Maintenance of Pretreatment Devices

EXPECTED RECORDS AND OUTPUTS

Completed SWMP Industrial Activities Survey/Matrix (Appendix B of SWMP)

- Obtain a copy of this document at <http://business.flydenver.com/environmental>.
- <http://business.flydenver.com/environmental>.
- Complete and return to ES for evaluation.

Spill and release records for any spills

- Responsible party (for the spill) notifies DEN Communications Center.
- Verbal or written reporting to regulatory agencies as required by their specific guidance is the responsibility of the operator.

Evidence of training

- While formal certifications are not always necessary, some form of “proof of training” (such as sign-in sheets and handouts) is expected and should be maintained on file by the operator.

Safety Data Sheets (SDS) for cleaning solutions/products

- Manufacturers of cleaning products will supply these documents on demand. SDSs for cleaning products should be made available to employees engaged in cleaning/washing activities and maintained on file by the Operator at the facility.

Evidence of approval of any cleaning solutions used for wet methods

- Metro Wastewater or DEN ES will issue a letter of approval for cleaning products on request, after review of product information provided by the Operator.

Disposal profile, manifests and shipping forms

- If off-site disposal of wash water occurs, a profile will be required by the disposal facility prior to shipping.
- Based on the disposal profile, manifests and related forms (e.g., invoice) may be required. Manifests and profile forms can be obtained from the disposal facility for off-site disposal activities (manifests are required for hazardous waste).
- All documents should be maintained on file by the Operator for at least three years.
